- G** Scratch resistant top

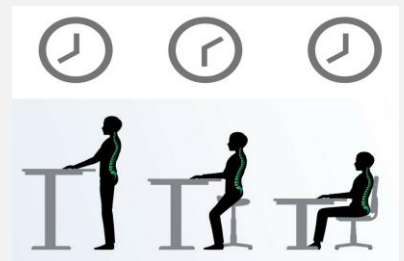

HANDSET

Modern controller with 4 pre-set memory height buttons and LED screen

BURNING CALORIES

A 2013 study showed that using a standing desk caused the heart to beat an average of ten beats faster per minute than when sitting. This equates to an additional fifty calories an hour burnt. A 2012 study comparing young adults using sitting and standing desks found that standing desk users burned 20.4 additional calories per hour. Given an average of three hours of standing per day, five days per week, this would equate to burning an extra 306 to 750 calories per week.
